### **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: the prior art of record does not teach or suggest a process for preparing an electrical cable essentially as claimed, said process comprising extrusion coating a conductor with a polymeric composition comprising polyethylene, radical initiator and at least one unsaturated carboxylic acid of the requisite formula and present in the requisite amount and heating the conductor to result in crosslinking of the polymeric composition. Sakayori et al, 4,048,355 teaches a process for forming a polyolefin coating layer onto a surface wherein the polyolefin can be modified with an unsaturated carboxylic acid that is in free form and the modification can take place in an extruder. The present invention differs from Sakayori because modification of the polyethylene does not take place during the extrusion step but the subsequent heating step of the coated conductor, as disclosed on page 12 of the specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
